

to serve the application just visit
<https://civilsoft-hcm.netlify.app/>

to run it on your machine just open file directory and run command **npm install**
when it finished run command **npm start** it will open new page automatically

to visit grid page before updating click on **earth icon at top left corner**

in grid you can add request, edit request , delete request

note there is no back end so when you entered new user it will added to grid
but after refresh the page all new data will be lost
